Important Product Info

Built to Last!

Centralized mail and package delivery equipment, such as Cluster Box Units (CBU), versatile™ 4C mailbox suites, and ExpressLockers™ help builders and design professionals alike provide a green delivery method which is built to last. Centralized delivery locations mean multiple deliveries per stop so less fuel is consumed overall; resulting in lower carbon emissions. Using durable powder coating methods which do not contain VOCs, Florence products resist weather deterioration and therefore also reduce the need for regular replacement. These quality products not only protect resources, but reduce costs due to their extensive product life. If however, they have come to the end of their long life, all product materials are recoverable for recycling.

Dedicated to Reduce - Reuse - Recycle!

Florence Corporation reduced its factory carbon footprint by implementing advanced process technology in our powder coat ovens and product washing units. These actions were recognized by the Kansas Department of Health and Environment (KDHE) with a Pollution Prevention Award during their 2009 Kansas Environmental Conference.

We are also dedicated to maintaining a successful recycling program which ensures the appropriate reuse and/or reprocessing of our aluminum, corrugate, powder paint, wood, and steel materials; as well as our office waste such as paper, toner cartridges and batteries. In addition, Florence has a team of committed employees who vigilantly review all of our systems for continuous improvement and new opportunities for reduction in raw materials and/or recycling of used materials.

Material Safety Data (MSDS)

MSDS sheets are not required for any Florence products and packaging, as they are exempt from the labeling and material safety data sheet requirements as provided under Title 29 CFR Part 1910.1200; nor do the product, or their packaging, contain any asbestos or PCBs.

UL Certified as ISO Manufacturer

Florence is extremely proud to be the *only* mailbox manufacturer who is both an ISO 9001:2008 and ISO 14001:2004 Underwriters Laboratory audited manufacturer. These regular audits by an internationally recognized third-party allow us to continually re-evaluate, monitor, and adjust our processes and procedures; ensuring we remain efficient, safe, and good environmental stewards. *Voluntarily* holding ourselves to these high standards ensures you will continue to receive a quality product and dedicated customer service.
